Misr International University Report

Sustainability Impact Rantings

SDG 12:

Responsible Consumption and Production

Our commitment to SDG 12 (Responsible Consumption and Production) is demonstrated by embedding sustainable consumption and production principles across our institution. We stand up for the practical application of resource efficiency, moving beyond research to transform our campus operations through advanced waste recycling and sustainable procurement. This report details our systematic efforts in waste management and fostering sustainable supply chains, initiatives that solidify our leadership in sustainability and enhance our performance in global rankings.

12.2.8. Minimization Policies Extend to Suppliers

The university proactively extends its policies for minimizing plastics and disposable items across its entire supply chain, embedding these sustainable procurement principles into contracts with all key suppliers of goods, including equipment, stationery, and building contractors. This is achieved by mandating, through tender documents and supplier agreements, that vendors demonstrate reduced and sustainable packaging, prioritize reusable or recyclable materials, and offer products aligned with the university's circular economy goals. This comprehensive approach ensures that the university's commitment to reducing its material footprint and solid waste generation is upheld not only internally but throughout its external operational ecosystem.

12.2.8. Minimization Policies Extend to Suppliers

Extension of University Policies to Outside Suppliers and the Supply Chain
Academic Year 2024/2025

Suppliers of equipment and devices must comply with the university's various policies—including policies for reducing medical plastic waste and single-use products, safe waste disposal, and recycling policies. An example of this is their signing of the supply terms and conditions included in the contracts.

This includes office supplies, medical devices, computers, and hardware equipment.

Prof.Dr. Mahassen Mohamed Farghaly
Acting President of the University
