Indicator 17.2.3

International collaboration on data gathering for the SDGs

Reporting period: academic year 2024–2025 (September 2024 – August 2025)

MIU participates in international initiatives that gather and measure data on progress towards the SDGs, contributing institutional data to global measurement exercises and taking part in global health campaigns coordinated by international organisations.

KEY EVIDENCE

Contributing institutional SDG data to the Times Higher Education Impact Rankings

Date	Results published June 2025
Partner	Times Higher Education (international SDG measurement exercise)
MIU unit	University-wide, coordinated by the ranking team
SDGs	SDGs 3, 6, 16 and 17

MIU gathers and submits institutional data on its performance against the Sustainable Development Goals to the THE Impact Rankings, the largest international effort to measure universities' progress on the SDGs. In June 2025 MIU recorded its sixth consecutive appearance, ranking 1001–1500 globally and seventh among participating Egyptian universities.

Preparing the submission requires faculties and administrative units across the university to collect and verify data on health, water, institutions and partnerships, building MIU's internal capacity for measuring its SDG performance.

Outcome: MIU's data contribute to a global, comparable dataset on university progress towards the SDGs, and the process strengthens the university's own SDG data collection.
